Price Excludes Freight & Installation

RM VerTable Interactive

The RM VerTable is an innovative piece of design that combines the best elements of flexible furniture with interactive technology. The RM VerTable is an excellent height adjustable classroom activity table in its own right, but by integrating the revolutionary Epson interactive projector the RM VerTable displays two complimentary modes of use. In its more traditional vertical setup it works just like an interactive whiteboard for whole-class instruction and collaboration, but by simply changing it into table top mode, teachers can now retain eye contact and physical engagement with a group gathered around the table.

It therefore becomes an incredibly powerful group collaborative tool, something that is difficult to achieve in a normal whiteboard environment. It's also totally mobile and height adjustable, so gives masses of flexibility as to who, how and where schools wish to make use of it.

Education Benefits

- Supports flexible teaching and use in open learning spaces, with lockable castors, height adjustment in both modes making it more than just an interactive whiteboard!
- Superb for all group work because of the level of physical interaction between teacher and group – but this is especially useful within SEN.
- The ability to flip between horizontal and vertical plains without switching off the projector means lessons can take on a more natural flow and give teachers flexibility to switch seamlessly between group work, group interactivity and whole class instruction.

3 years warranty

FAQs

What kind of activities are best suited to the RM VerTable?

Because it ships with the award winning RM Easiteach software, all whole-class teaching activities work well on the RM VerTable.

When using it in table mode, activities such as group problem solving, design, planning and map work immediately jump out as benefitting from its unique

design. But there are no limitations as to what you can do on the RM VerTable.

How easy is it to change between modes of use?

It's incredibly simple to change

from vertical to horizontal modes and back again – you just grab a handle on the back of RM VerTable and an assisted mechanism helps you drop it in place where it locks securely. No muscles required!
